

# HOW TO MAKE CO-PRODUCTION MORE EQUITABLE?

Funding mechanisms	Capacity-building at all levels	Community advocacy tools	Bridging research and practice
Provide more funding for co-production work, especially through flexible funding models.	Expand training in co-production, across multiple roles and career levels.	Develop a set of questions to ask researchers when approached.	Develop more spaces, such as workshops, where practitioners and scholars can meet.
Funders should provide their definition of co-production in proposal solicitations.	Foster communication spaces for those trying to expand their co-production skills.	Allocate more time and tools to help teams generate shared understandings.	Use the social sciences focused on the processes of generating science and its use.
Proposals should be reviewed by compensated community members.	Provide opportunities to shadow the work of other people and other co-production projects.	Implement institutional changes, including funding, to foster career opportunities.	Build and apply evidence-based approaches to co-production.
Expand the definition of scholarship to include outputs co-defined by co-producers.	Facilitate peer networks to share promising practices and means to overcome barriers.	Avoid repeated, short term engagement efforts that cause stress and burnout.	Share stories from practitioners and community members about co-production.
